Summary

Senior Flutter engineer specializing in **creator economy platforms** and **deep mobile OS integrations**. Built and shipped apps with **500K+ downloads** and **$5M+ annual transactions** — from **payments abstraction** and native **KYC pipelines** to **real-time media processing**. Known for measurable impact: **65% crash reduction, 18% retention lift, 75% faster deployments.**

Professional Experience

Tech Lead App, BigBang.Social Bengaluru, India | (Jul 2023 – Apr 2026)

- Architected a scalable creator monetization platform, driving **500,000+ downloads** and processing **$5M+ annually** via custom payments abstraction layers (**Cashfree, Razorpay**).
- Built deep OS integrations (**Instagram, YouTube, DigiLocker**) and engineered custom platform channels for real-time native media processing, **eliminating manual KYC bottlenecks** and streamlining onboarding.
- Executed low-level memory profiling and lifecycle optimization, slashing application crash rates by **65% (2.1% → 0.7%)** and significantly **reducing cold start times**.
- Integrated a comprehensive observability and engagement stack (**Mixpanel, Firebase Analytics, AppsFlyer, CleverTap**), enabling precise user segmentation that boosted **Day-30 retention by 18%**.
- Mentored a team of **4 engineers** in TDD and MVC architecture while establishing robust **Fastlane and GitHub Actions** CI/CD pipelines, reducing deployment time by **75%**.

Senior Flutter Developer, Under25 Bengaluru, India | (Oct 2021 – Jun 2023)

- Spearheaded the mobile experience for a rapidly scaling student platform, supporting **400,000+ users** and facilitating over **$20M+ in platform earnings**.
- Architected a real-time chat system utilizing **WebSockets**, implementing optimized threading and networking that drastically reduced message latency from **500ms to 200ms**.
- Accelerated team development cycles by standardizing **state management patterns** and building a shared UI component **library of 30+ reusable widgets**, cutting **feature development time by 30%** and reducing cross-feature bugs from inconsistent implementations.
- Optimized critical API and network layers to minimize redundant calls, maintaining a **seamless and responsive user experience in low-bandwidth connectivity environments**.
- Directed the implementation of custom A/B testing pipelines and resolved complex production bottlenecks, directly eliminating UI jank to ensure **fluid 60 FPS frame rendering**.

Projects

- **Aura**: Open-source dating app in Flutter + Supabase. Implemented card-based discovery with swipe gesture physics, freemium paywall logic, and clean architecture separating data/domain/presentation layers. **(Link)**
- **Mango** : Consumer Flutter app with parallax animation system and streak-based engagement mechanics. Focused on smooth 60 FPS rendering and a mascot progression system tied to daily affirmation completions. **(Link)**
- **Go-Template** : Production-ready Go microservice boilerplate with JWT auth, PostgreSQL via Prisma, Docker Compose setup, and clean architecture layering. Built to reduce cold-start time for new backend services. **(Link)**

Technical Skills

Mobile: Flutter, Dart, iOS/Android Internals, Platform Channels, MVC/MVVM, Provider, Riverpod, BLoC, GetX

Backend & Web: Golang, React, WebRTC, Firebase, Supabase, REST, GraphQL, WebSockets

DevOps: Fastlane, GitHub Actions, Jenkins, Docker, Testing, SonarQube

Tools: Mixpanel, Firebase Analytics, AppsFlyer, CleverTap, Sentry, Jira, Figma

Education

B.Tech in Computer Science Sri Venkateshwara College of Engineering (2017 – 2021)
